Subject index

Adsorption of *Saccharomyces cerevisiae* onto cellulose and ECTEOLA-cellulose films for ethanol production 181
Alcohol, fermentation, technology and economics – an update, 103
Alcohols, alicyclic, enzymatic separation of *cis* and *trans* isomers of, 265
Alcohol dehydrogenase, regeneration of NAD(H) by, in gel-entrapped yeast cells, 125
Alcohol dehydrogenase, bioelectrochemical fuel cell and sensor based on a quinoprotein, 383
Alginate, calcium, characterization of *Nitrosomonas europaea* immobilized in, 297
Alicyclic alcohols, enzymatic separation of *cis* and *trans* isomers of, 265
Amino acids, betaine and choline, role of, in vitamin B_{12} biosynthesis by strains of *Propionibacterium*, 454
Ammonia and hydrogen production, immobilized microorganisms for, 171
Amplification of light signals, autocatalytic enzyme system for, 209
Amylolytic activity and growth of *Aureobasidium pullulans* in starch-limited culture, 225
Anaerobic fixed-film wastewater treatment, 242
Antibiotic production, peptide, through immobilized biocatalyst technology, 403
Aspergillus niger, studies on some enzymes relevant to citric acid accumulation by, 369
Aspergillus niger, effect of some metabolic inhibitors on citric acid production by, 373
ATP, regeneration of, by chromatophores in aqueous two-phase systems, 33
Aureobasidium pullulans, growth and amylolytic activity of, in starch-limited culture, 225
Autocatalytic enzyme system for amplification of light signals, 209

Bacillus circulans, properties of immobilized β-D-galactosidase from, 115
Bagasse and rice straw, pretreated, comparison of the rates of enzymatic hydrolysis of, with cellulases, 281
Bead mill, 20 litre industrial, for the disruption of microorganisms, 143
Binding, comparison of pectolytic enzymes covalently bound to synthetic ion exchangers using different methods of, 204
Bioaffinity phenomena and molecular immobilization: a quick-reference literature survey of recent literature on, 70, 149, 230, 308, 389 and 463
Biocatalyst, immobilized, technology, peptide antibiotic production through, 403
Biocatalysts, immobilized, correlation of experimental and theoretical data for artificial and natural systems, 2
Biocatalysts, immobilized, EFB guidelines for the characterization of, 304
Biocatalysts, immobilization of, on new route transition metal-activated inorganic supports, 30
Bioconverions of hydrocarbons, *Pseudomonas oleovorans* as a tool: growth, morphology and conversion characteristics in different two-phase systems, 352
Bioelectrochemical fuel cell and sensor based on a quinoprotein, alcohol dehydrogenase, 383
Biomass, process considerations in the enzymatic hydrolysis of, 82
Biomass concentration and maintenance energy of *Saccharomyces cerevisiae* by continuous calorimetry, 291
Biomass production, microbial, from rice straw by fermentation with *Penicillium janthinellum*, 269

Calorimetry, continuous, estimating the maintenance energy and biomass concentration of *Saccharomyces cerevisiae* by, 291
Carbohydrates, soluble, microcolorimetric determination of, 37
Carbohydrates, enhancement of, in a methylotrophic yeast, 337
Carbon dioxide, importance of, for the cultivation of *Thermoactinomyces vulgaris* from spores, 129
Cells, living microbial, immobilization of, and their application for steroid transformations, 14
Cellulase, *Penicillium funiculosum*, immobilization of, on a soluble polymer, 342
Cellulase, *Trichoderma reesei* QM9414 and C30, action of on substrates with varying crystallinity, 345
Cellulase activity, enhanced, isolation of mutants of *Talaromyces emersonii* CBS 814.70 with, 260
Cellulase and ethanol production from cellulose by *Neurospora crassa*, 133
Cellulase and β-D-glucosidase, mutants of the white-rot fungus *Sporotrichum pulverulentum* with increased production, 425
Cellulase product, commercial, from *Penicillium funiculosum* and its relevance in the hydrolysis of cellulose, some kinetic properties of the β-D-glucosidase (cellobiase) in, 457
Cellulase production by a *Penicillium funiculosum* strain in an instrumented fermenter, 22
Cellulases, comparison of the rates of enzymatic hydrolysis of pretreated rice straw and bagasse with, 281
Cellulolytic culture of *Fusarium lini*, purification and properties of two exo-cellobiohydrolases from, 430
Cellulolytic fungi, significance of β-D-glucosidase in the measurement of exo-β-D-glucanase activity of, 25
Cellulose, cellulase and ethanol production from, by *Neurospora crassa*, 133
Cellulose, hydrolysis of, some kinetic properties of the β-D-glucosidase (cellobiase) in a commercial cellulase product from, 457
Cellulose and ECTEOLA-cellulose films, adsorption of *Saccharomyces cerevisiae* onto, for ethanol production, 181
Cellulose films, immobilization of luciferase from the firefly *Luciola mingrelica*: catalytic properties and thermostability of the enzyme immobilized on, 60
Cellulosic materials, effect of peracetic acid, sodium hydroxide and phosphoric acid on, as a pretreatment for enzymatic hydrolysis, 421
Cellulosic residues, mushrooms: potential protein source from, 251
Chloramphenicol production, biochemistry and genetics of, 332
Chromatophores, regeneration of ATP by, in aqueous two-phase systems, 33
Citric acid accumulation by *Aspergillus niger*, studies on some enzymes relevant to, 369
Citric acid production by *Aspergillus niger*, effect of some metabolic inhibitors on, 373
Clostridium beijerinckii cells, immobilized, continuous isopropanol–butanol–ethanol fermentation by, in a packed bed fermenter, 46
Crystallinity, substrates with varying, action of *Trichoderma reesei* QM9414 and C30 cellulase on, 345

5,6-Dimethylbenzimidazole (DMB), influence of, on vitamin B_{12} biosynthesis by strains of *Propionibacterium*, 361

Economics and technology of fermentation alcohol – an update, 103
EFB guidelines for the characterization of immobilized biocatalysts, 304
Endomycopsis fibuligera glucoamylase, behaviour of towards raw starch, 196
Energy, maintenance, and biomass concentration of *Saccharomyces cerevisiae* by continuous calorimetry, 291
Enzymatic hydrolysis of biomass, process considerations in, 82
Enzymatic separation of *cis* and *trans* isomers of alicyclic alcohols, 265
Enzyme system, autocatalytic, for amplification of light signals, 209
Enzyme technology, ionic strength: a neglected variable in, 227
Enzymes relevant to citric acid accumulation by *Aspergillus niger*, studies on, 369
Enzymic methods for extraction of inulin from Jerusalem artichokes, 445
Escherichia coli, purification and characterization of the D-xylose isomerase gene from, 417
Ethanol and cellulase production from cellulose by *Neurospora crassa*, 133
Ethanol production, performance of an immobilized yeast reactor system for, 41
Ethanol production, adsorption of *Saccharomyces cerevisiae* onto cellulose and ECTEOLA-cellulose films for, 181
Ethylene oxide production by immobilized *Mycobacterium* Py1 in a gas–solid bioreactor, 55
Exo-cellobiohydrolases, purification and properties of two, from a cellulolytic culture of *Fusarium lini*, 430
Exo-β-D-glucanase activity of cellulolytic fungi, significance of β-D-glucosidase in the measurement of, 25

Fermentation, methanogenic, of soluble wastes, the microbiological basis of process control in, 162
Fermentation alcohol, technology and economics of – an update, 103
Fermentation conditions, simulation of, for vitamin B_{12} biosynthesis from whey, 449

Fermenter, instrumented, studies on cellulase production by a *Penicillium funiculosum* strain in, 22
Firefly *Luciola mingrelica*: immobilization of luciferase from, catalytic properties and thermostability of the enzyme immobilized on cellulose films, 60
Fluorogenic substrates, 4-methylumbelliferyl esters as, for proteases, 137
Fuel cell and sensor, bioelectrochemical, based on a quinoprotein, alcohol dehydrogenase, 383
Fungi, cellulolytic, significance of β-D-glucosidase in the measurement of exo-β-D-glucanase activity of, 25
Fungi, production of phytate-hydrolysing enzyme by, 377
Fusarium lini, cellulolytic culture of, purification and properties of two exo-cellobiohydrolases from, 430

β-D-Galactosidase, immobilized, properties of, from *Bacillus circulans*, 115
α-D-Galactosidase immobilized on a soluble polymer, 285
Gas–solid bioreactor, ethylene oxide production by immobilized *Mycobacterium* Py1 in, 55
Gelatin, improved method for immobilizing invertase-active whole cells of *Saccharomyces cerevisae* in, 65
Gene for D-xylose from *Escherichia coli*, purification and characterization of, 417
Genetic recombination of *Micromonospora rosaria*, application of protoplast fusion technique to, 273
Genetics and biochemistry of chloramphenicol production, 332
Germanate, effect of, on the equilibrium of D-glucose and D-fructose with immobilized D-glucose isomerase, effect of oxyanions on the D-glucose isomerase catalysed equilibrium: (2), 121
Glucoamylase, *Endomycopsis fibuligera*, behaviour of, towards raw starch, 196
Glucoamylase, immobilized, pretreatment of starch raw materials and their enzymatic hydrolysis by, 199
D-Glucose isomerase catalysed equilibrium, effect of oxyanions on the: 2. Effect of germanate on the equilibrium of D-glucose and D-fructose with immobilized D-glucose isomerase, 121
β-D-Glucosidase, significance of, in the measurement of exo-β-D-glucanase activity of cellulolytic fungi, 25
β-D-Glucosidase (cellobiase), some kinetic properties of, in a commercial cellulase product from *Penicillium funiculosum* and its relevance in the hydrolysis of cellulose, 457
β-D-Glucosidase and cellulase, mutants of the white-rot fungus *Sporotrichum pulverulentum* with increased production of, 425
Guidelines, EFB, for the characterization of immobilized biocatalysts, 304

Haemin as a chemically amplifiable label, luminescence catalyst immunoassay of β_2-microglobulin with, 215
Hydrocarbons, bioconversions of, *Pseudomonas oleovorans* as a tool in: growth, morphology and conversion characteristics in different two-phase systems, 352
Hydrogen and ammonia production, immobilized microorganisms for, 171
Hydrolysis, enzymatic, of biomass, process considerations in, 82
Hydrolysis, enzymatic, effect of peracetic acid, sodium hydroxide and phosphoric acid on cellulosic materials as a pretreatment for, 421

Immobilization, molecular, and bioaffinity phenomena: a quick-reference literature survey of recent literature on, 70, 149, 230, 308, 389 and 463
Immobilization of biocatalysts on new route transition metal-activated inorganic supports, 30
Immobilization of living microbial cells and their application for steroid transformations, 14
Immobilization of luciferase from the firefly *Luciola mingrelica*: catalytic properties and thermostability of the enzyme immobilized on cellulose films, 60
Immobilization of *Penicillium funiculosum* cellulase on a soluble polymer, 342
Immobilization of urease within a thin channel ultrafiltration cell, 191
Immobilized biocatalysts, correlation of experimental and theoretical data for artificial and natural systems with, 2
Immobilized biocatalysts, EFB guidelines for the characterization of, 304
Immobilized biocatalyst technology, peptide antibiotic production through, 403
Immobilized *Clostridium beijerinckii* cells, continuous isopropanol–butanol–ethanol fermentation by, in a packed bed fermenter, 46
Immobilized β-D-galactosidase from *Bacillus circulans*, properties of, 115
Immobilized α-D-galactosidase, on a soluble polymer, 285
Immobilized glucoamylase, pretreatment of starch raw materials and their enzymatic hydrolysis by, 199
Immobilized D-glucose isomerase, effect of germanate on the equilibrium of D-glucose and D-frustose with. Effect of oxyanions on the D-glucose isomerase catalysed equilibrium: (2), 121
Immobilized microorganisms for hydrogen and ammonia production, 171
Immobilized *Mycobacterium* Py1, ethylene oxide production by, in a gas–solid bioreactor, 55
Immobilized *Nitrosomonas europaea*, in calcium alginate, characterization of, 297
Immobilized plant cell reactors, 323
Immobilized thermophilic methane-producing bacteria, methane production from organic acid-rich wastewaters, 441
Immobilized yeast-cell reactor, inulin hydrolysis by, 185
Immobilized yeast reactor system for ethanol production, performance of, 41
Immunoassay, luminescence catalyst, of β_2-microglobulin with haemin as a chemically amplifiable label, 215
Industrial bead mill, 20 litre, for the disruption of microorganisms, 143
Inhibitors, metabolic, effect of, on citric acid production by *Aspergillus niger*, 373
Inorganic supports, new route transition metal-activated, immobilization of biocatalysts on, 30
Inulin from Jerusalem artichokes, studies on enzymic methods for extraction of, 445
Inulin hydrolysis by an immobilized yeast-cell reactor, 185
Invertase-active whole cells of *Saccharomyces cerevisae*, improved method for immobilizing, in gelatin, 65
Ion exchangers, synthetic, comparison of pectolytic enzymes covalently bound to, using different methods of binding, 204
Ionic strength: a neglected variable in enzyme technology, 227
Isomers, *cis* and *trans*, of alicyclic alcohols, enzymatic separation of, 265
Isopropanol–butanol–ethanol fermentation, continuous, by immobilized *Clostridium beijerinckii* cells in a packed bed fermenter, 46

Jerusalem artichokes, inulin from, studies on enzymic methods for extraction of, 445

Lipid composition of the nitrogen starved green alga *Neochloris oleoabundans*, 435
Literature survey: A quick-reference literature survey of recent literature on molecular immobilization and bioaffinity phenomena, 70, 149, 230, 308, 389 and 463
Luciferase from the firefly *Luciola mingrelica*, immobilization of: catalytic properties and thermostability of the enzyme immobilized on cellulose films, 60
Luciola mingrelica, firefly, immobilization of luciferase from, catalytic properties and thermostability of the enzyme immobilized on cellulose films, 60
Luminescence catalyst immunoassay of β_2-microglobulin with haemin as a chemically amplifiable label, 215

Methane production from organic acid-rich wastewaters by immobilized thermophilic methane-producing bacteria, 441
Methanogenic fermentation of soluble wastes, the microbiological basis of process control in, 162
Methylotrophic yeast, enhancement of carbohydrates in, 337
4-Methylumbelliferyl esters as fluorogenic substrates for proteases, 137
Microcolorimetric determination of soluble carbohydrates, 37
β_2-Microglobulin, luminescence catalyst immunoassay of, with haemin as a chemically amplifiable label, 215
Microorganisms, experiences with a 20 litre industrial bead mill for the disruption of, 143
Micromonospora rosaria, application of protoplast fusion technique to genetic recombination of, 273
Mushrooms: potential protein source from cellulosic residues, 251
Mutants of *Talaromyces emersonii* CBS 814.70, isolation of, with enhanced cellulase activity, 260
Mutants of the white-rot fungus *Sporotrichum pulverulentum* with increased cellulase and β-D-glucosidase production, 425
Mycobacterium Py1, immobilized, ethylene oxide production by, in a gas–solid bioreactor, 55

NAD(H), regeneration of, by alcohol dehydrogenase in gel-entrapped yeast cells, 125

Neochloris oleoabundans, lipid composition of the nitrogen starved green alga, 435
Neurospora crassa, cellulase and ethanol production from cellulose by, 133
Nitrogen starved green alga *Neochloris oleoabundans*, lipid composition of, 435
Nitrosomonas europaea immobilized in calcium alginate, characterization of, 297

Oxyanions, effect of, on the D-glucose isomerase catalysed equilibrium: 2. Effect of germanate on the equilibrium of D-glucose and D-fructose with immobilized D-glucose isomerase, 121

Packed bed fermenter, continuous isopropanol–butanol–ethanol fermentation by immobilized *Clostridium beijerinckii* cells in, 46
Patent reports, 74, 153, 234, 312, 393 and 467
Pectolytic enzymes covalently bound to synthetic ion exchangers using different methods of binding, comparison of, 204
Penicillium funiculosum, some kinetic properties of the β-D-glucosidase (cellobiase) in a commercial cellulase product from, and its relevance in the hydrolysis of cellulose, 457
Penicillium funiculosum cellulase, immobilization of, on a soluble polymer, 342
Penicillium funiculosum strain, studies on cellulase production by, in an instrumented fermenter, 22
Penicillium janthinellum, microbial biomass production from rice straw by fermentation with, 269
Peptide antibiotic production through immobilized biocatalyst technology, 403
Plant cell reactors, immobilized, 323
Plant proteases, concentration of, by precipitation with polyacrylic acids, 365
Polyacrylic acids, concentration of plant proteases by precipitation with, 365
Polymer, soluble, α-D-galactosidase immobilized on, 285
Polymer, soluble, immobilization of *Penicillium funiculosum* cellulase on, 342
Phytate-hydrolysing enzyme, production of, by some fungi, 377
Proteases, 4-methylumbelliferyl esters as fluorogenic substrates for, 137
Pseudomonas oleovorans as a tool in bioconversions of hydrocarbons: growth morphology and conversion characteristics in different two-phase systems, 352
Purification and characterization of the D-xylose isomerase gene from *Escherichia coli*, 417
Purification and properties of two exocellobiohydrolases from cellulolytic culture of *Fusarium lini*, 430
Pretreatment for enzymatic hydrolysis, effect of peracetic acid, sodium hydroxide and phosphoric acid on cellulosic materials, 421
Pretreatment of starch raw materials and their enzymatic hydrolysis by immobilized glucoamylase, 199
Process considerations in the enzymatic hydrolysis of biomass, 82
Process control in methanogenic fermentation of soluble wastes, the microbiological basis of, 162
Propionibacterium, influence of 5,6-dimethylbenzimidazole (DMB) on vitamin B_{12} biosynthesis by strains of, 361
Propionibacterium, role of amino acids, betaine and choline in vitamin B_{12} biosynthesis by strains of, 454
Proteases, plant, concentration of, by precipitation with polyacrylic acids, 365
Protein source, potential, from cellulosic residues: mushrooms, 251
Protoplast fusion technique, application of, to genetic recombination of *Micromonospora rosaria*, 273

Reactor, immobilized yeast-cell, inulin hydrolysis by, 185
Reactors, immobilized plant cell, 323
Regeneration of ATP by chromatophores in aqueous two-phase systems, 33
Regeneration of NAD(H) by alcohol dehydrogenase in gel-entrapped yeast cells, 125
Rice straw, microbial biomass production from, by fermentation with *Penicillium janthinellum*, 269
Rice straw and bagasse, pretreated, comparison of the rates of enzymatic hydrolysis of, with cellulases, 281

Saccharomyces cerevisae, improved method for immobilizing invertase-active whole cells of, in gelatin, 65
Saccharomyces cerevisiae, adsorption of, onto cellulose and ECTEOLA-cellulose films for ethanol production, 181
Saccharomyces cerevisiae, estimating the maintenance energy and biomass concentration of, by continuous calorimetry, 291
Sensor and fuel cell, bioelectrochemical, based on a quinoprotein, alcohol dehydrogenase, 383
Sporotrichum pulverulentum, mutants of the white-rot fungus, with increased cellulase and β-D-glucosidase production, 425
Starch, raw, behaviour of *Endomycopsis fibuligera* glucoamylase towards, 196
Starch raw materials, pretreatment of, and their enzymatic hydrolysis by immobilized glucoamylase, 199
Starch-limited culture, growth and amylolytic activity of *Aureobasidium pullulans* in, 225
Stereochemistry and mechanism of α,β-elimination of L-tyrosine catalysed by tyrosine phenol-lyase, 219
Steroid transformations, immobilization of living microbial cells and their application for, 14
Straw, rice, microbial biomass production from, by fermentation with *Penicillium janthinellum*, 269
Supports, inorganic, new route transition metal-activated, immobilization of biocatalysts on, 30

Talaromyces emersonii CBS 814.70, isolation of mutants of, with enhanced cellulase activity, 260
Technology and economics of fermentation alcohol – an update, 103
Theoretical data, correlation of experimental and, for artificial and natural systems with immobilized biocatalysts, 2
Thermoactinomyces vulgaris, cultivation of, from spores, importance of carbon dioxide for, 129
Thermophilic methane-producing bacteria, immobilized, methane production from organic acid-rich wastewaters by, 441
Thin channel ultrafiltration cell, immobilization of urease within, 191
Transition metal-activated inorganic supports, new route, immobilization of biocatalysts on, 30
Trichoderma reesei QM9414 and C30 cellulase, action of, on substrates with varying crystallinity, 345
Tyrosine phenol-lyase, mechanism and stereochemistry of α,β-elimination of L-tyrosine catalysed by, 219
Two-phase systems, aqueous, regeneration of ATP by chromatophores in, 33
Two-phase systems, growth, morphology and conversion characteristics in: *Pseudomonas oleovorans* as a tool in bioconversions of hydrocarbons, 352

Urease, immobilization of, within a thin channel ultrafiltration cell, 191

Vitamin B_{12} biosynthesis by strains of *Propionibacterium*, influence of 5,6-dimethylbenzimidazole (DMB) on, 361
Vitamin B_{12} biosynthesis by strains of *Propionibacterium*, role of amino acids, betaine and choline in, 454
Vitamin B_{12} biosynthesis from whey, simulation of fermentation conditions for, 449

Wastes, soluble, methanogenic fermentation of, the microbiological basis of process control in, 162
Wastewaters, organic acid-rich, methane production from, by immobilized thermophilic methane-producing bacteria, 441
Wastewater treatment, anaerobic fixed film, 242
Whey, simulation of fermentation conditions for vitamin B_{12} biosynthesis from, 449

D-Xylose isomerase gene from *Escherichia coli*, purification and characterization of, 417

Yeast, immobilization, reactor system for ethanol production, performance of, 41
Yeast, methylotrophic, enhancement of carbohydrates in, 337
Yeast-cell, immobilized, reactor, inulin hydrolysis by, 185
Yeast cells, gel-entrapped, regeneration of NAD(H) by alcohol dehydrogenase in, 125
